

Mine Closure and Rehabilitation

Early identification and incorporation of closure objectives and principles into project planning can significantly reduce future environmental and financial liabilities.

MBS has an experienced team of environmental professionals able to support clients through all stages of the mine closure process.

MBS provides closure planning services for the life of mine, including:

- Identification of closure obligations and commitments.
- Identification and management of closure issues through risk assessment.
- Development of stakeholder consultation and communication strategy and integration into closure planning.
- Determination of appropriate post-mining land use(s) and closure objectives.
- Development of site-specific and measurable completion criteria.
- Development of mine closure implementation plans, care and maintenance plans and progressive rehabilitation scheduling.
- Development and implementation of monitoring programs.
- Closure costing in accordance with regulator and international financial standard requirements.
- Facilitation of rehabilitation earthworks design specifications and contractual documentation, contractor selection and award, rehabilitation earthworks supervision.
- Facilitation of mine site relinquishment.
