

# Environmental Management

MBS Environmental has extensive experience in developing, assisting with implementation and auditing of Environmental Management Systems (EMS), Environmental Management Plans (EMPs) and Operational Procedures for exploration, mining and construction projects. Specifically, MBS can provide:

- › Strategic project planning.
- › Development and implementation of an integrated EMS, consistent with relevant accepted standards, such as ISO 14001.
- › Development of an Environmental Policy.
- › Facilitation of Aspect Identification and Risk Assessment workshops.
- › Development of Compliance Registers.
- › Preparation of project wide EMPs and aspect specific plans such as those for surface water, groundwater, waste, air quality, noise, erosion control, flora and fauna, weed and dieback, rehabilitation, acid sulfate soil and hydrocarbon management.
- › Development of procedures to assist with operational control.
- › Facilitation of workplace training and inductions.
- › Development of environmental monitoring programs.
- › Auditing of compliance and assessing effectiveness of the EMS, plans and procedures.
